Introduction

The main aim of this project is understanding the machine learning algorithms like classification, regression and clustering by working on huge amounts of data. Python programming language will be used during the implementation of these algorithms. Powerful libraries like Scikit-Learn and PyTorch will make the implementation of algorithms easier.

Overview

Machine learning is a branch of the artificial intelligence (AI) and computer science which focuses on the use of data and algorithms to imitate the way that humans learn. Classification, regression and clustering are some tasks that machine learning concerns. Classification refers to a predictive modeling problem where a class label is predicted for a given example of input data, regression is a technique for investigating the relationship between independent variables or features and a dependent variable or outcome and lastly clustering is the task of dividing the population or data points into a number of groups such that data points in the same groups are more similar to other data points in the same group and dissimilar to the data points in other groups.

Project Definition

In this project we are given a dataset which is called as “Issue Tickets” and we are expected to perform several machine learning tasks on this dataset. There will be different deliveries of this project. At the beginning, we will examine the dataset given us in order to extract features and understand dataset better. Then, ML algorithms will be performed to get deeper understanding of the dataset.

Data Statistics

Dataset Name: Issue Tickets

Dataset File Type: .ods

ISSUE_ID field was removed before our analysis.

- Number of rows and number of columns of dataset:

# of Rows	# of Columns
16969	15

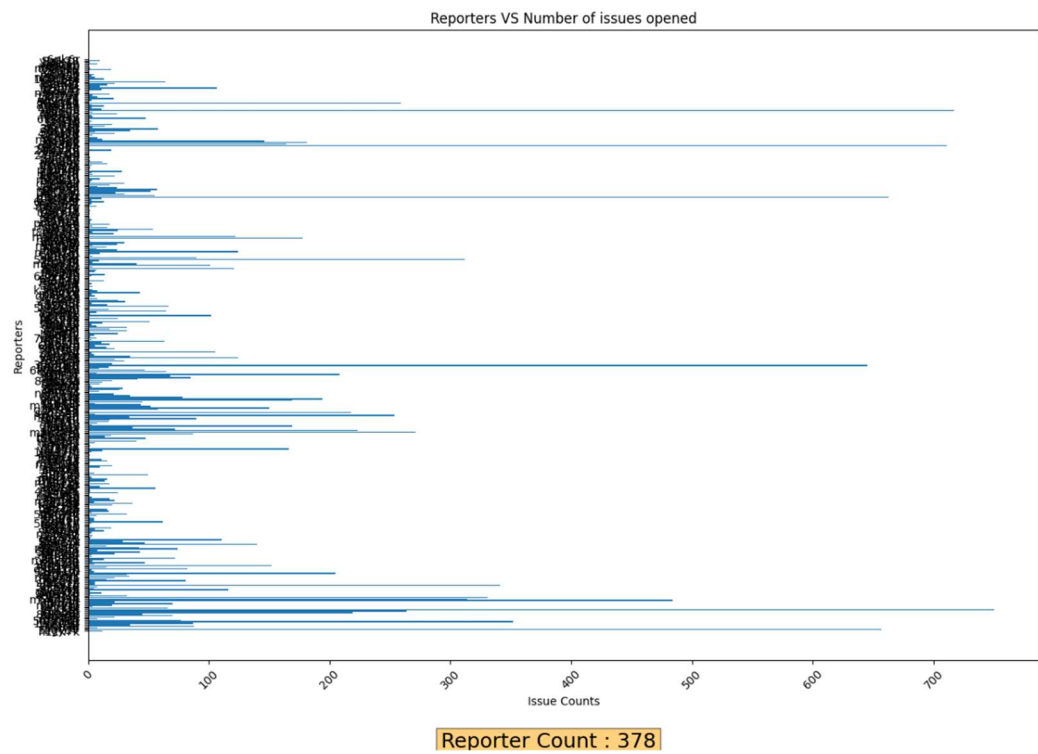

- The important features and their types are:

Feature	Type
REPORTER	Text
ISSUE_TYPE	Text
PRIORITY	Text
COMPNAME	Text
WORKER	Text
EMPLOYEE_TYPE	Text
WORK_LOG	Numeric
ISSUE_CATEGORY	Text
LABEL	Numeric
CREATION_DATE	Text
RESOLUTION_DATE	Text

- These are the target attributes that can be used for classification / regression:

Target Attributes	Classification / Regression
WORK_LOG	Regression
ISSUE_CATEGORY / LABEL	Classification

- Count of issues opened by each reporter:

- Number of issue types and count of each issue type:

- Issue types and priority distribution:

- Number of issues opened by each company:

- Number of issues that each worker worked on:

- Employee types and their counts:

- Number of issues that each employee worked on:

- Total minutes spent on each issue type:

- Total minutes spent on each issue category:

- Number of each issue category:

- Number of issues opened at days of a month:

- Number of issues opened at months of a year:
